Sand Bar State Park

Season: Mid-May to September (Labor Day)

Welcome to Sand Bar State Park, named for the natural sandbar between South Hero Island and the Vermont mainland. The park is on the mainland, or eastern end, of that sandbar. The sandbar is the result of the Lamoille River, over thousands of years, washing sediment downstream from the present Lamoille Valley. The river borne material sank to the bottom as the river emptied into Lake Champlain, eventually filling the lake to create the marshland south and east of the park, and the sandbar to the west. Natural lake depths here, without the sandbar, would be over 150 feet. As it is, water depth now along the top of the sandbar to South Hero is only a couple of feet. Because of the shallow water, the route along the sandbar served as a ford from the mainland to the islands well before construction of the first bridge in 1850. Crossing that first toll bridge, which was built of rock, gravel, and logs laid corduroy-fashion through the marsh and along the bar, must have been an adventure. Narrow and much lower than today's causeway, it was often flooded and always needed major repairs after damage caused by shifting ice each spring. Even crossing the present wider, higher causeway, completed in 1959, can be an adventure when snow blowing across the frozen lake blocks visibility, or spray and water from crashing waves washes across the highway during storms when the lake is high.

Marshlands south and east of the park are part of the 1000-acre Sand Bar Wildlife Refuge, established in 1920 and managed by the Vermont Department of Fish and Wildlife. Home to beaver, muskrats, raccoons, and turtles, it's a seasonal stopover for a great variety of migratory waterfowl and other birds, a waterfowl nesting area, and spawning grounds for many of the lake's fish. Hunting, fishing and trapping are not allowed on refuge land.

Sand Bar State Park opened in 1933 and was built by the Civilian Conservation Corps, or CCC, a nationwide public works program created during

the great economic depression of the 1930's. The program provided jobs and training for thousands of unemployed. Many of the parks in this country, both state and national, trace their origins to the CCC era. Sand Bar's stone bathhouse was a CCC project completed in 1935. The original 10-acre park included a small campground on the south side of the highway. As US 2 became a busier and faster road, camping close to it, and crossing back and forth, was neither desirable nor particularly safe. In 1970, a land swap gave the former campground, now a fishing access area, to the Fish and Wildlife Department and brought the park to its present 15-acre size. The useable length of beach was doubled and the picnic area, newer bathhouse, and long parking lot were built as the park expanded east onto land acquired from the refuge.

Today, at Sand Bar, the smooth, sandy lake bottom remains shallow well out from shore, making this an ideal swimming spot for children. That, and the uninterrupted length of sandy beach, very high quality water in this section of the lake, and well-kept facilities in an attractive setting combine to make Sand Bar the most visited day park in the state.

Park Facilities and Services – This park is for day use only, with groups welcome (advance arrangements are encouraged). There is a two thousand-foot long sand beach, swimming, boat rentals, food concession, and shaded or open picnic areas with tables and cooking grills. Write or call the park to make group arrangements.
