Interpreting these numbers: Vermont State Parks samples managed swimming areas at parks that are open for the season. Samples are taken weekly and analyzed at certified labs and results are returned after about 24 hours. We are testing for e-coli which is an "indicator" bacteria. It is called an indicator because while it may not cause sickness itself, it's presence could reflect the possible presence of other sickness causing organisms. Results are a calculated count, or "most probable number" of e-coli bacteria per 100 milliliter sample.
